DIY Guide to Running Appliances on Solar Power

The larger the battery capacity, the more appliances you can run. To find out how much capacity a battery has, multiply amp hours x volts / 100 = watt hours. $400\text{ah} \times 24\text{V} = 9600 / 100 = 96$ watt hours. So a 100% charged, 400ah 24V battery can run an appliance or appliances for 96 hours.
