

Parts for solar power generation

Overview

The main part of a solar electric system is the solar panel. There are various types of solar panel available in the market. Solar panels are also known as photovoltaic solar panels. Solar panel or solar module. In a grid-tie solar system, solar modules connect directly to an inverter, not to the load. Solar power. This is not desirable to overcharge and under discharge a lead acid battery. Both overcharging and under discharging can badly damage the battery system. To avoid these both situati. Solar panels produce DC electricity, while the grid supplies AC electricity. To use both sources for common equipment, an inverter is needed to convert the solar system's DC to the same AC I.
