## Overview

Photovoltaic (PV) has been extensively applied in buildings, adding a battery to building attached photovoltaic (BAPV) system can compensate for the fluctuating and unpredictable features of PV power generation. It is. ••Photovoltaic with battery energy storage systems in the single building and t. As the energy crisis and environmental pollution problems intensify, the deployment of renewable energy in various countries is accelerated. Solar energy, as one of the oldest. In the early development of the BAPV system, the off-grid PV system was usually used. Nevertheless, the peak of its PV power generation does not occur simultaneously a. The PV-BESS in the single building is now widely used in residential, office and commercial buildings, which has become a typical system structure for solar energy utilization. As sh. The PV-BESS in the energy sharing community obtains higher economic returns and operational benefits than that in the single building. Through power and capacity sharing. This section provides relevant suggestions for future research directions of the PV-BESS and better usage of the renewable energy, which can further promote the development of t.
