

What is the wire mesh of the battery photovoltaic factory

Overview

The term balance of system, often just simply abbreviated as BOS, includes many components that are part of a solar power system. Commonly, these are: 1. Cables and Wires 2. Charge Controllers 3. Combiner Boxes 4. Connectors 5. Disconnects & Fuse Boxes 6. Mounting Systems 7. Recombiners. Cables and wires are considered as veins and arteries of any electrical power system. In most cases, electricity is generated at one device. In the solar industry, commonly three main types of DC cables and wires are used in PV installations which are: 1. Earth wires 2. Single core 3. Twin Core. The size of the wire is often measured in AWG (American Wire Gauge) which is a standardized wire gauge measuring system. As a rule of. Cables and wires have a maximum voltage and maximum current rating that indicate the maximum voltage (Volts) and current (Amps) that pass through the cable. These maximum.
